**Subject:** Transmission line--DO NOT BUILD THIS TRANSMISSION LINE.

I am opposed to the building of the line. From the most recent research, electrical needs and technology...this line will soon be obsolete.

'IF' it is built, it should follow existing right of ways and current transmission lines. IF it is built an appropriately large decommission fund should be established that will pay for complete decommission, removal and rehabilitation of ll lands and impacts.

The line should not go anywhere Morgan Lake City Park where it can affect the view-shed nor the raptor population there.

The line should have all technology and add-ons to ensure no raptor electrocution, and to protect all special and rare habitats.

These lines invent and then necessitate permanent clear-cuts, use of herbicides, new roads, and are a negative and perceptual environmental impact. It should not be built! Period!

Who pays? Who benefits? The rate payers will pay. The utilities will reap the benefits. As rate payer in NE Oregon, in what possible way do we benefit? None.

**DO NOT BUILD THIS TRANSMISSION LINE.**

We the rate payers and users are not asking for it and do not want to pay for it. The environment will suffer for no good reason. It is not fiscally prudent or appropriate.

Look to the future---the near term--- local generation, efficiency, and new technolsoh=gies will change everything. This is a dinosaur you are wanting to build.

**DO NOT BUILD THIS TRANSMISSION LINE.**
