The Sixth Northwest Conservation Council and Electric Power Plan states that 85% of the power needs for this region can be met for the next 20 years through conservation. Smart grid system technology is rapidly advancing to meet future power needs through efficient conservation. The B2H transmission line degradation of populated areas, farm ground, scenic vistas and wildlife habitat is unacceptable. This high power transmission line will not provide enough electrical power to nullify its degradation of the state of Oregon. Idaho Power needs to scrub this project and concentrate its resources on conservation.
