As a resident of the Morgan Lake area I would like to encourage you to use the alternative route. Setting the power lines back from the lake would be respectful to the community, residents and users of this area. This encouragement stands alone and is outside of your responsibilities to avoiding disruption of habitat. It is clear that no matter where you put the lines some habitat will be disrupted. Man can not expand with out taking over habitat of other life or vice versa. It would be, on the other hand, unfortunate for you to ignore specific endangered or protected habitat when an alternative was easily available. Thank you for this process to share our feelings about your expansion.
