**Subject:** B2H Project Draft EIS Comments

Dear Sirs:

Proposed route of power line past Flagstaff Hill: these lines impact the view shed of the Oregon Trail Center and the short piece of the Oregon Trail that still exists in this area. The Timber Canyon Alternative would save the view of the Interpretive Center and preserves sage grouse habitat.

The EIS projects crossing the Oregon Trail at least 11 times. We have little left in Oregon of the original trail. The access roads for the power lines would obliterate it in places, and the tall power structures would intrude on the view from the trail. The State of Oregon has not been able to preserve enough of the trail because of various building projects, wind mills, and agricultural use.

Please consider the alternate route as the one that does the least harm.
