Subject: Transmission project

Please consider this email our objection to the B2H transmission line project. We object in general as we know that the wildlife will be affected and likely move out of the area. The noise from such a project is especially bad for the birds and for that matter people living in the general area. We object specifically to the line crossing our property and for that matter having it near our property. Again we have lots of wildlife on our property which include elk, deer, turkey, bear, grouse, quail, coyotes, porcupine, cougar, hawks, owls and numerous other small bird species. It is fair to say that they often come to the natural springs on our property and find refuge as we do not over hunt or for that matter hunt at all in the last few years. Our property is used by many locals that come to enjoy the view, picnic and take their families to a quite place.

Please consider our plea and move the line to the freeway corridor. Thank you, Linda Stelle
