We strongly object to the siting of the proposed Boardman to Hemingway Transmission line project over the proposed route. The proposed line causes extreme damage to valuable agricultural and recreational private and public lands in Northeast Oregon. The productive and sensitive lands can not be replaced. It will also cause severe economic disruption to the Oregon Communities. This route does not benefit local citizens, land owners or the community. It will disrupt family farms and homes. The environmental impact is also understated in the report. The route proposed by the Umatilla County Commissioners following I-84 corridor is the least disruptive route for this line environmentally, economically and socially to our area. Please consider this alternate route for the line. Andy and Karen VanderPlaat
