Please look at a new way to run your power line. The path that you are going to follow now is placed right over our 20 acres of land. We do not have a lot of land but have worked very hard to make it out home. We have a family with animals and a productive 17 acres. We recently installed a Pivot so that we can produce our farm land better. We have hay and corn that we sale to help pay for our farm. 20 acres is not a lot of land but for us it is all we have. Your projected 500 kW power line would effect us on s daily basis. And would bring down the value of our land. The noise allow would effect out horse and dogs badly and our animals are our family! There is no way we could pet with them anymore then we can pet with our own children so there is no option of not having them.
